Table 1. **ImageNet**. Linear-evaluation on ImageNet-1k (the ViT-H/16₄₄₈ is pretrained at a resolution of 448×448). I-JEPA improves linear probing performance compared to other methods that do not rely on hand-crafted view data-augmentations during pre-training. Moreover, I-JEPA demonstrates good scalability — the larger I-JEPA model matches the performance of view-invariance approaches without requiring view data-augmentations.
